

AMIKA - Purchase Behavior

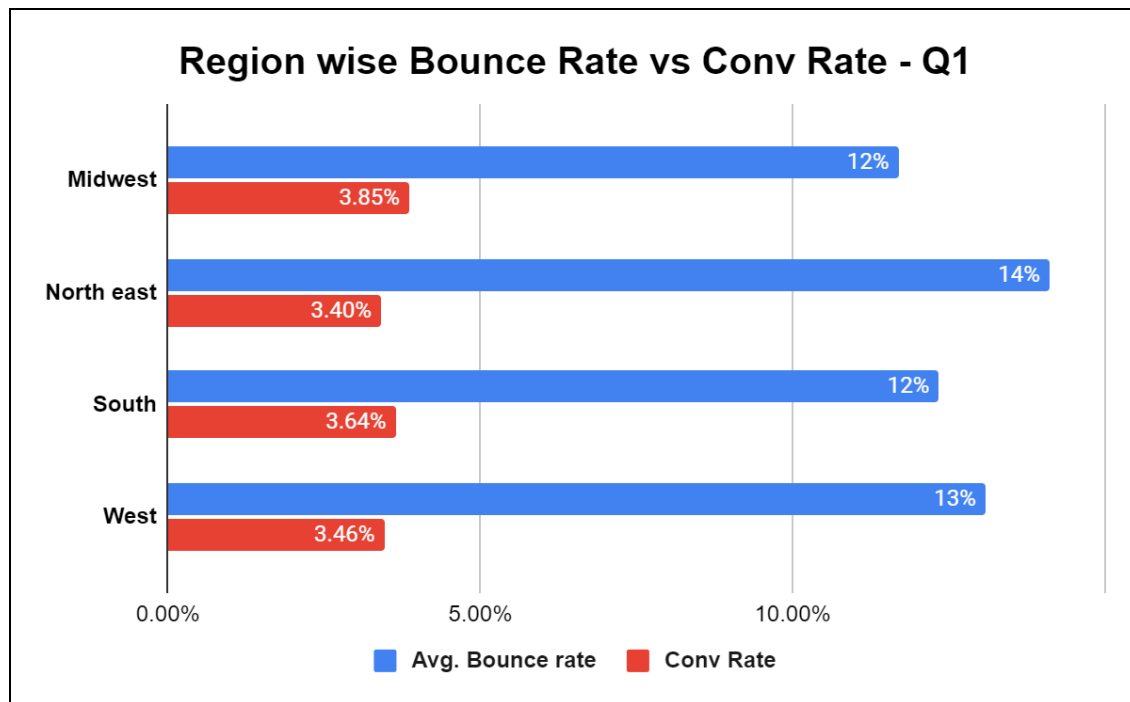

Summary

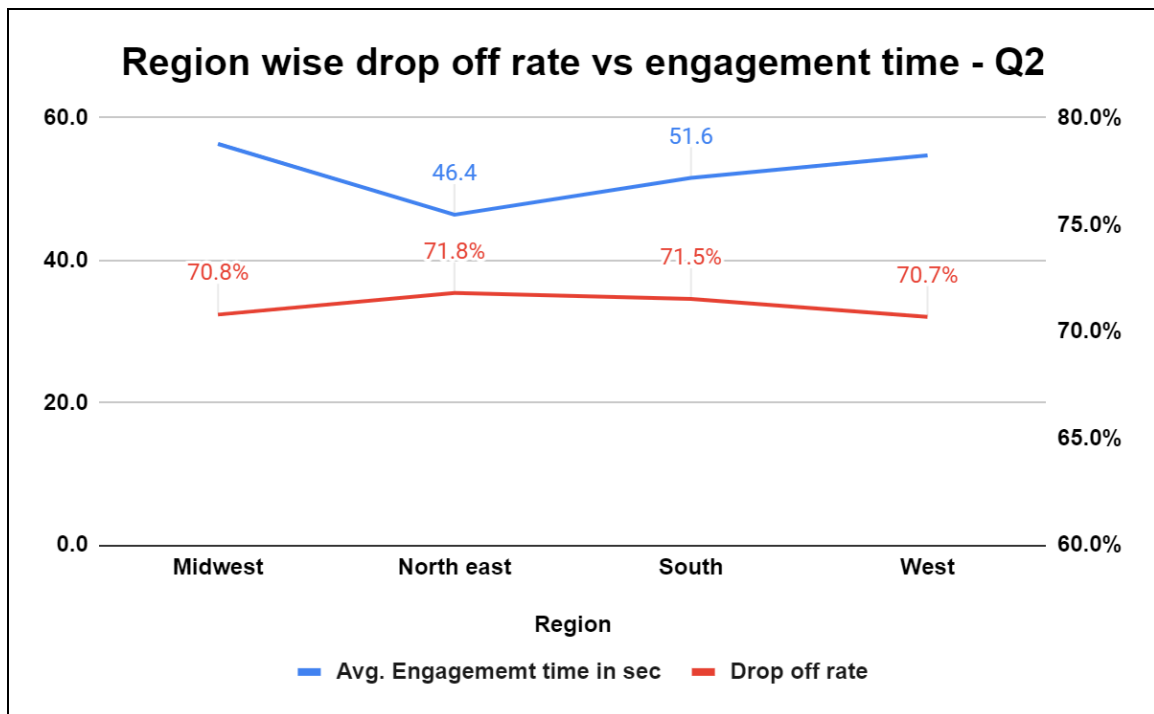

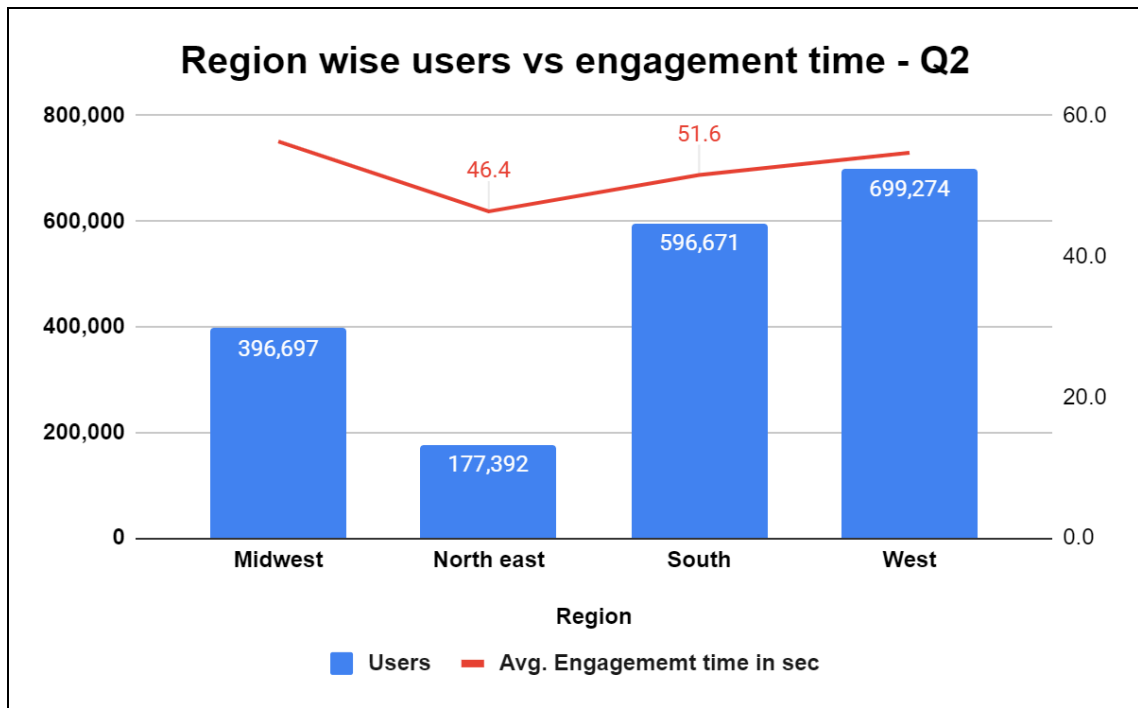

- In the NorthEast region, there is a longer time lag and lower volume of sales. This can be attributed to the highest bounce rate, lowest conversion rate, and highest product drop-off rate.
- A comparison between the traffic shares of the Midwest and NorthEast regions reveals that the North East has the highest bounce rate and cart drop-off rate. This can be attributed to the fact that the North East region receives the highest proportion of traffic from social channels, which tends to be less converting traffic. Additionally, the focus on driving awareness campaigns in the North East may contribute to the longer time lag in sales due to the top-of-funnel (TOF) factor.
- It appears that the company's team has made a deliberate decision to prioritize driving awareness through extensive social media campaigns in the NorthEast region, where the brand is based. The objective seems to be to generate more offline sales directly, which explains the emphasis on offline conversions rather than immediate online conversions

What we're seeing about High Value Audiences by Region:

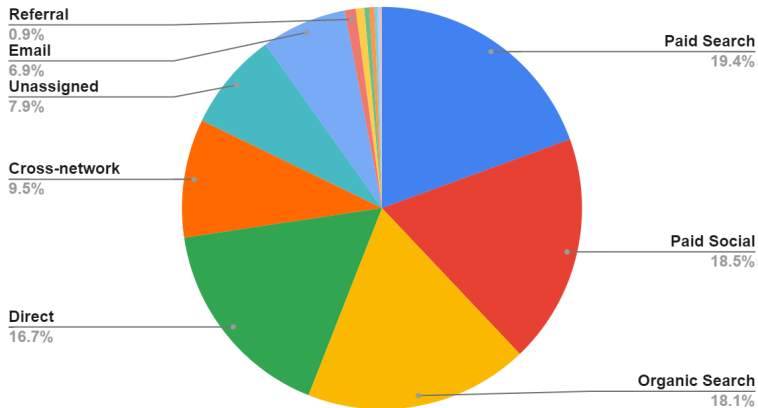

Data source: for Q1 (Till Mar 28): GA3, Sitewide; Q2 (From Apr 11): GA4, Sitewide
We have excluded data from Mar 19 - Apr 10 from all analysis due to data irregularities

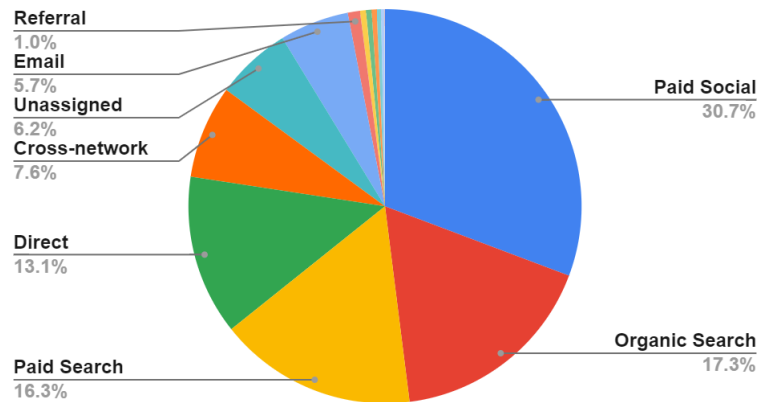

Summary of Analysis:

Users by Channel - Mid West

Users by Channel - North East

Paid Vs Organic - Diff in Users & Orders
